#### **Hal Automation Ltda**

# **HDF1 – Axial Piston Pump**

Size 25 - 63 | Up to 38.0 MPa | Up to 63 L/min

#### **Features:**

- Low noise level.
- High pressure limit
- Cast iron shrinkage
- Materials with high mechanical resistance
- Reinforced seal
- 25 to 63 cm<sup>3</sup> / rev (0.73 to 7.92 in<sup>3</sup> / rev)
- Rated working pressure up to 38 MPa (5511 PSI)
- Intermittent pressure up to 42 MPa (6092 PSI)
- Maximum 2750 RPM
- Long service life.

### Functional, section, symbol

The compact size of HDF1 pumps, coupled with their technology, means that can be installed in environments with little available space and be used at relative speeds of rotation. Pump automatically adjusts the required direction of rotation and easy installation. Mount the suction line in the required position, depending on the direction of rotation of the PTO, and the pump will adjust accordingly.

#### Deflector for Protection of the Shaft Seal

This deflector ensures the protection of the shaft retainers pump drive. In particular, it protects the road dust projection pump when mounted on cardan shafts.

#### By-Pass Valve

The by-pass valve is a 12- or 24-volt solenoid valve.

When deactivated, the pump connects the pressure discharge to the suction line. When activated, the pump directs the discharge to the pressure line. If the control valve limits the return of fluid to the tank, to less than 5 Lpm or the setting of the distributor is "closed center", a drain line must be installed between the bypass valve and the tank to ensure sufficient fluid circulation to prevent the pump from overheating.

For applications where the pump is continuously driven by the PTO (PTO without disengagement)use a bypass valve, mounted on the rear of the pump. This solution allows the pump to be continuously activated:

- Without the risk of fluid overheating.
- Without affecting pump life.
- No necessary modifications to the circuit hydraulic equipment

#### ATTENTION!

In case that difference of temperature of the hydraulic oil is more than 20°C during a start the pump, it is recommended to start the pump by short pulses (switch on approx. 1 sec. and switch off approx. 5 sec.) to prevent of seizure. In the case that hydraulic oil is heated by meaning of heater it is necessary to switch on the pump in the same time.
